

Water Fluoridation Basics

This fall 2019,
Calgary City
Council will re-
evaluate adding
fluoride to our
water.

- All citizens have the right to safe, clean, un-medicated water. It is a human right.
- Fluoride is highly toxic, and it is not ethical to force a toxic substance on people. Water fluoridation denies a person's right of choice and informed consent.
- Fluoride is not necessary for a single body function.
- 99% of fluoridated water is not consumed and goes back into the environment unchecked. The tax dollars saved from putting a toxic treatment in our water could be better utilized for more effective interventions.
